

Science Grade 6 – Physical Student Learning Expectations

The student should be able to:

1. Define properties of matter.
2. Identify physical, chemical, and biological properties of matter.
3. Define and give examples of chemical change.
4. Give examples of how the properties of materials determine their use.

5. Explain the difference between renewable and non-renewable resources and give examples.
6. Explain the environmental impact of production, use, and disposal of different materials.
7. Explain why recycling and source reduction are important components of an integrated waste management program.
